Welcome

Welcome to the 3rd Annual Caloona Charolais and Mala-Daki Simmentals Bull Sale.

The last 12 months has seen a welcome resurgence and confidence in the Australian beef cattle industry even with continuing challenges of the COVID-19 pandemic and flooding rains across parts of eastern Australia.

All Mala-Daki Simmentals sale animals are poll and have been DNA tested and parent verified. DNA results confirm that 18 bulls are homozygous poll with 5 being homozygous black. DNA poll results for the 10 females confirm that 7 are homozygous poll and 6 being homozygous black (5 being both homozygous poll and black).

The sale will be conducted by Elders Stud Stock as an On-Property Auction, interfaced and livestreamed with AuctionsPlus. Inspections are welcome prior to the sale by appointment and sale day inspections will be available from 10:00 am.

Agents from Elders and Chris Paterson Stock and Station Agents will be onsite on sale day to assist with your animal selection.

We look forward to welcoming you to inspect our 2022 offering of bulls and females and being part of our 3rd Annual sale.

Location

ADDRESS

'Turramurra'
1137 Middlebrook Road
Loomberah NSW 2340

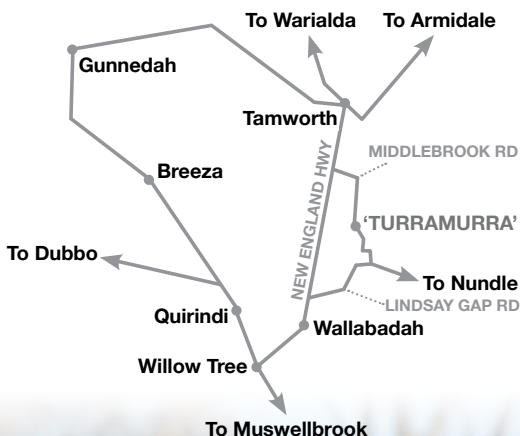

DIRECTIONS

From Tamworth (AELEC roundabout)

Drive south 17km and turn left into Middlebrook Road. Drive 6.5km to the T-Intersection, turn right and drive 4.5km to 'Turramurra' on left.

From Wallabadah BP Service Station

Drive north 7.5km turn right into Lindsay Gap Road. Drive 18.5km, turn left into Middlebrook Road, drive 13.5km to 'Turramurra' on right.

CATALOGUE DESIGNED BY JENNIFER N IMPEY

Lot 1**CALOONA PARK RIDDLER (P/S) (R/F)**

Louie & Steven Franco

**Polled Scurred
Red factor****Born** 27/8/2020**Tattoo** LSF R53E**Age** 21 months**Grade** Pure

BLUE GATE PARK LEVI (P)

Sire: CALOONA PARK NUGGET (P)

CALOONA PARK KAILEY

AIRLIE FARLANE (P)

Dam: CALOONA PARK LAVENDER

CALOONA PARK CURVY 3

Comments Riddler is a powerhouse red factor bull to start our draft of bull off. He stands over a lot of ground and has great skin, muscling and plenty of thickness through the hindquarter. He is sired by the 2019 Sydney Royal Horden Trophy winner Caloona Park Nugget. This bull will add that performance and finish required to his calves.

Dam: CALOONA PARK KACEY (LSF K78E)

CALOONA PARK KAREN (LSF K142E)

CALOONA PARK ESTELLE (LSF E166E)

Comments Ripper is a very complete polled bull we really like for his length of spine, thickness and width through his hindquarter combined with plenty of muscle expression, yet displaying ample softness.

He has excellent feet and legs and portrays all the carcass qualities beef cattlemen should be looking for in their calves. He was shown at Sydney Royal this year and placed first in his class.

A bull we think a lot of and one to look out for!

CALOONA PARK GLADIATOR (LSF G57E) (P)

Dam: CALOONA PARK LOLA (LSF L60E) (P)

CALOONA PARK DAISY (LSF D136E)

Comments Sonic Boom is a polled bull that comes with a high recommendation! We believe this is one of the best polled bulls we have bred to date. He is an absolute tremendous carcass bull, with that extra length of body, beautiful smooth skin type and softness as an added bonus. He stands on excellent feet and bone, he is wide and thick when you get behind him. This is a bull that will fit into a stud or astute commercial breeding program. Selling ½ share in the bull and full possession.

Comments

A homozygous poll, red Simmental bull with a birth weight of 40kg. R24 is a solid, red bull with a bit extra length and thickness.

Sired by Mala-Daki Eldorado N33 who has left a very consistent line of great calves.

R24 has more muscle mass than any other bull in the sale with a lovely slick coat and a true sires outlook.

AuctionsPlus

How to Register and Bid on AuctionsPlus

1

Go to **www.auctionsplus.com.au** to register at least 48 hours before the sale.

2

Select **“Sign Up”** in the top right hand corner.

3

Fill out your name, mobile number, email address and create a password.

4

Go to your emails and confirm the account.

5

Return to AuctionsPlus and log in.

6

Select **“Dashboard”** and then select **“Request Approval to Buy”**.

7

Fill in buyer details and once completed go back to Dashboard.

8

Complete buyer induction module (approx. 30 minutes).

9

AuctionsPlus will email you to let you know that your account has been approved.

10

Log in on sale day and connect to auction.

11

Bid using the two-step process – unlock the bid button and bid at that price.

12

If you are successful, the selling agent will contact you post sale to organise delivery and payment.

For more information please contact us on:

Phone: (02) 9262 4222

Email: info@auctionsplus.com.au

About Us

CALOONA CHAROLAIS

Caloona Charolais is owned by Louie and Steven Franco. The stud started as a small hobby about 30 years ago and progressed to over 200 breeders before refining it to around 100 elite breeders in recent times.

They have had success showing cattle at numerous local and Royal shows with most recent results being awarded Interbreed Bull and part of the Hordern Trophy winning pair at Sydney Royal Easter Show.

The main aim of Caloona is to produce cattle suitable for commercial producers, with softness and adequate muscle and fat cover.

AWARDS

2019 Sydney Royal Easter Show

Hordern Perpetual Trophy winning team

Most Successful Exhibitor Charolais breed

Junior Champion & Grand Champion Bull (CP Nugget)

2017 Sydney Royal Easter Show

Reserve Senior Champion Female (CP Kate)

Junior Champion, Grand Champion & Supreme Exhibit (CP Little Hero)

Urhuqart Trophy Champion Bull

Most Successful Exhibitor Charolais breed

2014 Sydney Royal Easter Show

Grand Champion Bull & Supreme Exhibit (CP Hero)

About Us

MALA-DAKI SIMMENTALS

Mala-Daki Simmentals is a family owned operation established in the early 1990s by Jason and Jacqueline Impey, along with their twin daughters Jennifer and Jessica.

Breeders of red, black and traditional Simmentals and SimAngus with a commitment to producing moderately framed, structurally correct cattle with ideal temperament and carcass traits.

The carcass traits were recognised being part of the winning 2019 Stan Hill Trophy team, which included two Mala-Daki steers and winning Domestic Champion in the RAS Beef Challenge.

AWARDS

2022 Sydney Royal Easter Show

Calf Champion Female

Junior Champion Female

Purebred Steer Live Judging 4th place - Heavy Weight

Purebred Steer Live Judging 2nd place - Light Weight

Purebred Steer Carcass One Silver Medal

Purebred Steer Carcass Two Bronze Medals

2021 Beef Australia

Junior Champion Simbrah Female

2019 Sydney Royal Easter Show

Stan Hill Trophy

Purebred Steer Carcass 1st place Heavyweight
(sired by MD Red Amigo K649)

Purebred Steer Carcass Two Silver Medals

Mala-Daki Simmentals

2019 RAS Beef Challenge

Champion Individual Steer - 70 day Domestic Class

1st in the Live Assessment (1st out of 318 steers)

2018 RAS Beef Challenge

Bronze Medal for Taste Test

Highest Average Daily Gain Heavyweight Steers

2nd Most Profitable Export Team

3rd Place Team in Export Feedlot Trial

2018 Sydney Royal Easter Show

Purebred Steer Carcass 1st place - Middleweight Class

Purebred Steer Carcass Two Silver Medals

2018 Beef Australia

Sale Information

INSPECTIONS

Inspections are welcome prior to the sale by arrangement with the vendors or agents. All lots will be penned by 10:00 am sale day.

SALE DAY CATERING

Complimentary refreshments will be available.

HEALTH

All bulls and females have been examined for health and structural soundness by Dr Rhys Duncan of Piper Street Veterinary Clinic with bulls being crush side semen tested, scrotal measurements taken and a Veterinary Bull Breeding Soundness Evaluation certificate issued. Sale bulls have been vaccinated with Ultravac 7 in 1, Pestigard (for BVDV), Vibrovax, 3 Day (BEF), Tick fever (3 Germ) and were treated with Cydectin LA and Multimin Evolution in May 2022. The sale females have been vaccinated with Ultravac 7 in 1, Pestigard (for BVDV) and were treated with Cydectin LA and Multimin Evolution in May 2022. The herd has a Johne's Beef Assurance Score (JBAS) of 6.

RAW DATA

All bulls will be weighed and then scanned by Bovine Scanning Services prior to the sale for eye muscle area (EMA), rump fat, rib fat and IMF. Supplementary information will be available at www.bullsale.com.au and on social media prior to sale day.

6 MONTH GUARANTEE

All sale animals have been evaluated for structural soundness and fertility. To the best of our knowledge the bulls are in sound working order and females are reproductively sound at the time of the sale. Any claim against the breeding ability or a structural breakdown of any animal must be made in writing and accompanied by a Veterinary Certificate within six months of the sale date. Any animal failing to breed may be either replaced with an animal of similar value (if available) or credit made available to the value of the purchase price, minus salvage value, as a refund. The purchaser will be responsible for any veterinary and other costs incurred.

DELIVERY

Free delivery for bulls will be offered up to 300km from Tamworth. Animals waiting delivery or pickup will be held free of charge for up to 14 days, unless prior arrangements are made. All care will be taken, but absolutely no responsibility will be accepted for any injury or loss occasioned during, as a consequence of, or in relation to any holding.

TRANSFER OF REGISTRATION

All registered sale animals are registered with Simmental Australia or Charolais Australia and are able to be transferred to your ownership on request and at your cost.

AUCTIONSPLUS

The sale will be conducted as an On-Property Auction by Elders, interfaced with AuctionsPlus. A card registration will be used, with your PIC number required. The sale will be conducted under normal auction conditions. AuctionsPlus Online bidding will be available, go to www.auctionsplus.com.au to register. Contact AuctionsPlus on (02) 9262 4222 for more information.

OUTSIDE AGENT REBATE

A 2% rebate will be offered to outside agents with written introduction received 48 hours prior to the sale and/or if the agent accompanies the purchaser to the sale and settles on their behalf within 7 days of the sale.

TERMS & CONDITIONS

Terms of the sale are as per Conditions of Sale for New South Wales Stud Stock.

The Caloona Charolais and Mala-Daki Simmentals Bull Sale will be conducted by Elders (Tamworth) and Chris Paterson Stock and Station Agent using a Live Auction interfaced with AuctionsPlus. Elders (Tamworth) will be the settling agent. All lots will be sold exclusive of GST.

INSURANCE

Ownership passes at the conclusion of the sale and it is recommended all cattle be insured.

COVID-19

Please follow any directions and safety signs in regard to COVID-19. Please be responsible and respectful of the health and safety of others and do not attend if you are not feeling well.

SALE DAY SAFETY

All sale bulls and females have been screened for temperament and are quiet to handle under normal circumstances. There are, however, risks associated with cattle handling. Visitors enter the cattle pens at their own risk and children must not enter pens.

POLL/HORN STATUS & COAT COLOUR TESTING

All Simmental sale animals have been DNA tested for parentage, poll status and coat colour.

DISCLAIMER

People entering upon this property for any purpose whatsoever including attendance at cattle auctions do so at their own risk. We are not liable to you for any personal injury or death suffered by you and for theft loss or damage to any property caused or contributed to by us or by any other person whether caused or contributed to by or by negligence deliberate act or unlawful conduct. "We" or "us" or "our" refer to the owners, their employees, contractors and agents and each of them.

While every care has been taken in compiling this catalogue to ensure accuracy of information supplied no responsibility is accepted for any errors which may have occurred.

BreedPlan EBVs Explained

BREEDPLAN is a modern genetic evaluation system for beef cattle breeders and uses the world's most advanced genetic evaluation system (based on Best Linear Unbiased Prediction (BLUP) technology) to produce Estimated Breeding Values (EBVs) of recorded cattle for a range of important production traits (eg weight, carcass, fertility). Included in the calculation of EBVs are the performance of the animal and known relatives, the heritability of each trait and the relationship between the different traits with all traits combined in one analysis.

GROUP BREEDPLAN EBVs cannot be validly compared with EBVs from any other BREEDPLAN analysis therefore Simmental Breedplan EBVs cannot be compared to Charolais Breedplan EBVs.

EBVs

An animal's breeding value is its genetic merit, half of which will be passed on to its progeny. While we will never know the exact breeding value for performance traits it is possible to make good estimates called Estimated Breeding Values. In calculating EBVs, the performance of individual animals within a contemporary group is directly compared to the average of other animals in that group. A contemporary group consists of animals of the same sex and age class within a herd, run under the same management conditions and treated equally. Indirect comparisons are made between animals reared in different contemporary groups, through the use of pedigree links between the groups.

EBVs are expressed in a unit of measurement for each particular trait. They are shown as positive + or negative - differences between an individual animal's genetics difference and the genetic base to which the animal is compared. For example, a bull with an EBV of +50 kg for 600 Day Weight is estimated to have genetic merit 50 kg above the breed base of 0 kg.

Whilst EBVs provide the best basis for the comparison of the genetic merit of animals reared in different environments and management conditions, they can only be used to compare animals analysed within the same analysis.

EBVs are published for a range of traits covering fertility, calving ease, milking

Calving Ease (%) are based on calving difficulty scores, birth weights and gestation length information. More positive EBVs indicate easier calving.

CE % Dir = Direct Calving Ease - The EBV for direct calving ease indicates the influence of the sire on calving ease in purebred females calving at two years of age.

CE % Daughters = Daughters' Calving Ease - The EBV for daughters' calving ease indicates how easily that sire's daughters will calve at two years of age.

Gestation Length (days) is an estimate of the time from conception to the birth of the calf (based on Artificial Insemination and paddock mating). Lower (negative) Gestation Length EBVs indicate shorter gestation length and therefore easier calving and increased growth after birth.

Birth Weight (kg) is based on the measured birth weight of progeny, adjusted for dam age. The lower the value the lighter the calf at birth and the lower the likelihood of a difficult birth.

200 Day Growth (kg) is calculated from the weight of progeny taken between 80 and 300 days of age. Values are adjusted to 200 days and for age of dam. This EBV is the best single estimate of an animal's genetic merit for growth to early ages.

400 Day Weight (kg) is calculated from the weight of progeny taken between 301 and 500 days of age, adjusted to 400 days and for age of dam. This EBV is the best single estimate of an animal's genetic merit for yearling weight.

600 Day Weight (kg) is calculated from the weight of progeny taken between 501 and 900 days of age, adjusted to 600 days and for age of dam. This EBV is the best single estimate of an animal's genetic merit for growth beyond yearling age.

Mature Cow Weight (kg) is based on the cow weight when the calf is weighed for weaning, adjusted to 5 years of age. This EBV is an estimate of the genetic difference in cow weight at 5 years of age and is an indicator of growth at later ages and potential feed maintenance requirements of the females in the breeding herd.

Milk (kg) is an estimate of an animal's milking ability. For sires, this EBV indicates the effect of the daughter's milking ability, inherited from the sire, on the 200-day weights of her calves. For dams, it indicates her milking ability.

Scrotal Size (cm) is calculated from the circumference of the scrotum taken between 300 and 700 days of age and adjusted to 400 days of age and is an estimate of an animal's genetic merit for scrotal size. There is also a small negative correlation with age of puberty in female progeny and therefore selection for increased scrotal size will result in reduced age at calving of female progeny.

Days to Calving (days) indicates the fertility of the daughters of the sire. It is the time interval between the day when the female is first exposed to a bull in a paddock mating to the day when she subsequently calves. A negative EBV for days to calving indicates a shorter interval from bull-in date to calving and therefore higher fertility.

Carcass Weight (kg) is based on abattoir carcass records and is an indicator of the genetic differences in carcass weight at the standard age of 650 days.

Eye Muscle Area EMA (sq cm) is calculated from measurements from live ultrasound scans and from abattoir carcass data, adjusted to a standard 300 kg carcass. This EBV estimates genetic differences in eye muscle area at the 12/13th rib site of a 300 kg dressed carcass. More positive EBVs indicate better muscling on animals. Sires with relatively higher EMA are expected to produce better muscled and higher percentage yielding progeny at the same carcass weight than will sires with lower EMA.

Rib Fat and Rump Fat (mm) are calculated from measurements of subcutaneous fat depth at the 12/13 rib site and the P8 rump site (from live ultrasound scans and abattoir carcasses) and are adjusted to a standard 300 kg carcass. These EBVs are indicators of the genetic differences in fat distribution on a standard 300 kg carcass. Sires with low, or negative, fat EBVs are expected to produce leaner progeny at any particular carcass weight than will sires with higher EBVs.

Retail Beef Yield RBY (%) indicates genetic differences between animals for retail yield percentage in a standard 300 kg carcass. Sires with larger EBVs are expected to produce progeny with higher yielding carcasses.

Intramuscular Fat IMF (%) is an estimate of the genetic difference in the percentage of intramuscular fat (marbling) at the 12/13th rib site in a 300 kg carcass. Larger, more positive values are generally more favourable.

BreedPlan EBVs Explained

Accuracy

Accuracy (%) is based on the amount of performance information available on the animal and its close relatives - particularly the number of progeny analysed. Accuracy is also based on the heritability of the trait and the genetic correlations with other recorded traits. Hence accuracy indicates the "confidence level" of the EBV. The higher the accuracy value the lower the likelihood of change in the animal's EBV as more information is analysed for that animal or its relatives. Even though an EBV with a low accuracy may change in the future, it is still the best estimate of an animal's genetic merit for that trait. As more information becomes available, an EBV is just as likely to increase in value, as it is to decrease. Accuracy values range from 0-99%. The following guide is given for interpreting accuracy:

Accuracy range	Interpretation
less than 50%	EBV should be considered as a preliminary estimate. It could change substantially as more performance information becomes available.
50-74%	Medium accuracy, usually based on the animal's own records and pedigree. Still subject to substantial changes with more information, particularly when the performance of progeny are analysed.
75-90%	Medium - high accuracy and includes some progeny information. Becoming a more reliable indicator of the animal's value as a parent
more than 90%	High accuracy estimate of the animal's true breeding value. It is unlikely that the EBV will change much with the addition of more progeny data.

Selection Indexes

Simmental selection indexes are calculated for four market specifications: Domestic Maternal, Export Maternal, Northern Terminal and Vealer Terminal.

Charolais selection indexes are calculated for three market specifications: Domestic Maternal, Export Maternal, Northern Terminal

Indexes are reported as an EBV in units of relative earning capacity (\$'s) for a given market. They reflect short-term profit generated by a sire through the sale of his progeny and the longer-term profit generated by his daughters in a self replacing cow herd.

Domestic Maternal Index - Estimates the genetic differences between animals in net profitability per cow joined for an example commercial herd in Southern Australia (e.g. Angus cows) targeting the domestic supermarket trade. Steers are either finished on grass or grain (e.g. 60-70 days). Steers are marketed at 430 kg live weight (240 kg HSCW and 6 mm P8 fat depth) at 14 months of age. Daughters are retained for breeding.

Export Maternal Index - Estimates the genetic differences between animals in net profitability per cow joined for an example commercial herd in Southern Australia (e.g. Angus cows) targeting the export trade. Steers are finished on grain (e.g. 120 days) and marketed at 700 kg live weight (380 kg HSCW and 8 mm P8 fat depth) at 28 months of age. Daughters are retained for breeding.

Northern Terminal Index - Estimates the genetic differences between animals in net profitability per cow joined for an example commercial herd in Northern Australia (e.g. Brahman cows) targeting the export trade. Steers are finished on grass and marketed at 630 kg live weight (345kg HSCW and 12mm P8 fat depth) at 28 months of age. This is a terminal production system therefore no daughters are retained for breeding.

Vealer Terminal Index - Estimates the genetic differences between animals in net profitability per cow joined for an example commercial herd in Southern Australia (e.g. Angus cows) targeting the vealer trade. Vealers are weaned and sold at 8 months of age weighing 350 kg (195 kg HSCW and 6 mm P8 fat depth). This is a terminal production system therefore heifers are not retained for breeding purposes.
